Benefits

VDSL2 High Speed Broadband Access

The C1000Z is based on VDSL2 standards offering fast access to the Internet while maintaining stable connections delivering enough bandwidth to surf the Internet. Heavy multimedia use, such as simultaneously streaming video/audio content and online-gaming, is faster and smoother with the C1000Z.

802.11n Wireless Technology

The C1000Z features 802.11n technology with 5 dBi antennas (2T x 2R) which provides the ultimate solution: improved speed, reduced dead zones, and extended coverage. With data rates of up to 300 Mbps, the C1000Z provides stable and reliable wireless connections for high-speed data and multimedia delivery.

Enhanced Security Features Forms Robust Protection

Enhanced security ensures the protection of traffic from the WAN to the LAN. Through ZyXEL's implementation of dual Ethernet firewalls (NAT and SPI), the C1000Z is able to identify and manage malicious content and applications. And, as part of its wireless security design, the C1000Z supports WPA2/WPA/WEK and features a hardware WPS button allowing customers to enjoy easy setup using a simple button. These features simplify the end user's ability to set up and utilize a secure, wireless network.

TR-069 Remote Management

The C1000Z provides DSL Forum compliant TR-069 remote management features to ensure faster deployment by Service Providers. In addition, ZyXEL's standard onboard management options, remote provisioning, monitoring, and management features help CenturyLink reduce OPEX while enhancing customer satisfaction.

IPv6 Enabled

Many North American carrier networks are migrating from IPv4 to IPv4/IPv6 which creates the potential for stranded equipment unable to support these requirements. Certified as an IPv6-ready vendor for over three years, ZyXEL is a global-provider of equipment supporting dual-stack IP networks and provides this feature on many current ZyXEL products, including the C1000Z.
